

# Core Platform Enhancements

November 2011

## Workflow

- Preview results includes totals
- Viewing results no longer necessitates execution of a new search
- Option to turn off all aspects of lemmatization at all times (by user or admin control)
- Search screen sort for 'date' sorts on date of publication
- Retrieve same results by search form or command
- Can search one databases and then another, and then combine searches for de-dupe

## Command Line

- Shortened syntax for use of: EXPLODE, NEAR and PRE, EXACT
- Wildcard truncation with characters specified
- Can paste search strategy line by line directly into the command line box
- Combine set searches with proximity operators

## Search History and Pricing

- Display and export search history
- View full search strategy history
- Display and export session cost estimate

## Author Searching

- Sorting Author lists
- Improved author look up and search e.g. J. Luck, J.LUCK

## Thesauri

- Thesauri display and browsing improvements
- Thesauri added to Foodline and International Pharmaceutical Abstracts

## Saving Searches

- Narrow filters used to refine results saved with the query
- Improved editor

## Sets

- Option to present sets in ascending or descending order
- Use and display the short version s1, s10 etc.
- Option for detailed vs. brief view of sets

## De-Duplication

- Addressed publication date issues
- Control order of appearance for duplicates by database within session
- Note: Title normalization & processing improvements expected mid November
